                                                                                                                                                                                                                                                                                                                                                                                                                                                                                /note==lst strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pGMVSPORT 6 vector. Library was normalized.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9

/note="Organ: Prostate; Vector: pT7T3 Pac; Site_1: ECOR I; Site_2: Not 1; The library was constructed according bonaldo. Lennon and Soares, Genome Research, 6:791-806, 1996. Denatured RNA was size fractionated on a 1% agence gel. First strand CDNA synthesis was primed with oligo-dT primer containing a Not 1 site. Double strand CDNA was size selected according to mRNA size fraction, ligated with EcoR I adaptor, digested with Not I and then cloned directionally into PT7T3 Pac vector. The library tag direction promise sequence located between the Not I site and the polyA tail is CCCAC. Tissue was provided by Tim Ratlift."

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                44

US-09-232-149A-14/C

Sequence 14, Application US/09232149A

Patent No. 6455611

SEGURRAL INFORMATION:
APPLICANT: Wi. Jiangchun

APPLICANT: Mitcham, Jenning.
TITLE OF INVENTION: COMPOUNDS FOR IMMUNOTHERAPY OF PROSTATE

TITLE OF INVENTION: COMPOUNDS FOR IMMUNOTHERAPY OF CURRENT APPLICATION NUMBER: US/09/232,149A

CURRENT APPLICATION NUMBER: US/09/232,149A

CURRENT FILING DATE: 1999-01-15

NUMBER OF SEQ ID NOS: 338

SOFTWARE: FastSEQ for Windows Version 3.0

LENGTH.: 816
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           816

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

GENERAL INFORMATION:

APPLICANT: SHIMOMURA, Takeshi
APPLICANT: SHIMOMURA, Toshiya
KITAMURA, Naomi
MIYAZAWA, Keiji
TITLE OF INVENTION: NOVEL PROTEIN, DNA CODING FOR SAME
AND METHOD OF PRODUCING THE PROTEIN
NUMBER OF SEQUENCES: 18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              COMPUTER READBLE FORM:
MEDIUM TYPE: Floppy Disk
MCDIUM TYPE: Floppy Disk
COMFUTER: IBM PC compatible
OOFRATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/09/765,449
